

Deployment Status

Completed Tasks

1. Domain Updates

All domain references have been updated from `findbrexitconsultants.co.uk` to `FindBrexitConsultants.co.uk`:

- **Updated Files:**
- `playwright.config.ts` - Test base URL
- `src/components/Footer.tsx` - Email addresses
- `src/pages/CookiePolicyPage.tsx` - Privacy email
- `src/pages/ContactPage.tsx` - Contact email
- `index.html` - Meta tags, Open Graph, and canonical URLs
- `SUPABASE_CORS_SETUP.md` - CORS configuration

2. GitHub Actions Setup

- Created `.github/workflows/vercel-deploy.yml` for automatic Vercel deployment
- Workflow triggers on pushes to main/master branch
- Optimized for production builds with proper caching

3. Git Repository Setup

- Initialized git repository in the project

- Added all files and created initial commit
- Configured remote origin: `https://github.com/mitchell1972/findbrexitconsultants`
- Ready for push to GitHub

4. Documentation

- Created `GITHUB_DEPLOYMENT_README.md` with setup instructions
- Created `setup-git-and-deploy.sh` script for easy deployment

Next Steps (Action Required)

Step 1: Push to GitHub

```
cd /workspace/findbrexit-consultants
git push -u origin master
```

Step 2: Configure GitHub Secrets

Add these secrets in your GitHub repository settings:

1. **VERCEL_TOKEN** - Your Vercel authentication token
 - Get from: `https://vercel.com/account/tokens`
2. **VERCEL_ORG_ID** - Your Vercel organization ID
 - Get by running `vercel link` locally, then check `.vercel/project.json`
3. **VERCEL_PROJECT_ID** - Your Vercel project ID
 - Get by running `vercel link` locally, then check `.vercel/project.json`

Step 3: Configure Custom Domain in Vercel

1. Go to Vercel project settings

2. Navigate to Domains section
3. Add: `FindBrexitConsultants.co.uk`
4. Configure DNS as instructed by Vercel

Automatic Deployment

Once the secrets are configured, every push to the master branch will automatically:

1. Build the project
2. Deploy to Vercel
3. Make it live at `FindBrexitConsultants.co.uk`

Project Structure

```
findbrexit-consultants/
├── .github/workflows/vercel-deploy.yml # Auto-deployment
├── src/                               # React application
├── dist/                             # Build output
├── vercel.json                       # Vercel configuration
├── package.json                     # Dependencies
└── GITHUB_DEPLOYMENT_README.md      # Detailed setup guide
```

Ready for Production!

Your `FindBrexitConsultants.co.uk` application is now fully configured and ready for deployment to Vercel via GitHub Actions!
