

# READY TO DEPLOY - Action Required

Your FindBrexit Consultants application is **fully prepared** and configured for deployment to your GitHub repository: <https://github.com/mitchell1972/findbrexitconsultants>

## Important Note

I cannot directly push to external GitHub repositories from this sandboxed environment due to authentication limitations. However, everything is ready for you to complete the deployment.

## What's Ready for You

### Fully Configured Project

- All files configured for your repository:  
`mitchell1972/findbrexitconsultants`
- GitHub Actions workflow ready for automatic deployment
- Vercel configuration optimized for your domain
- Git repository initialized with proper commit history
- All documentation and setup scripts prepared

### Deployment Package Created

- Clean deployment package: `findbrexit-consultants-deployment.tar.gz` (1.2MB)
- Contains all necessary files (excludes node\_modules, test results, etc.)
- Ready to extract and push to GitHub

## NEXT STEPS - Complete These Locally

### Option 1: Use Existing Prepared Files

```
# Navigate to the prepared directory (from where you downloaded
these files)
cd findbrexit-consultants

# Add your GitHub repository as remote (if not already done)
git remote add origin https://github.com/mitchell1972/
findbrexitconsultants.git

# Push to your GitHub repository
git push -u origin main
```

## Option 2: Use Clean Deployment Package

```
# Extract the deployment package
tar -xzf findbrexit-consultants-deployment.tar.gz
cd findbrexit-consultants-clean

# Initialize git repository
git init
git add .
git commit -m "Initial commit: FindBrexit Consultants application"
git branch -M main

# Add your GitHub repository
git remote add origin https://github.com/mitchell1972/
findbrexitconsultants.git

# Push to GitHub
git push -u origin main
```

## After GitHub Push - Set Up Vercel

### 1. Import to Vercel

- Go to [vercel.com](https://vercel.com)
- Click "New Project"
- Import: `mitchell1972/findbrexitconsultants`
- Framework: **Vite** (auto-detected)

## 2. Add Environment Variables in Vercel

```
VITE_SUPABASE_URL=https://zjfilhbczaquokqlcoej.supabase.co
```

```
VITE_SUPABASE_ANON_KEY=eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpc3MiOiJzdXBhYmF
```

## 3. Configure GitHub Actions (Optional)

For automatic deployments, add these secrets to your GitHub repository:

- `VERCEL_TOKEN` (from Vercel Settings → Tokens)
- `VERCEL_ORG_ID` (from Vercel Settings → General)
- `VERCEL_PROJECT_ID` (from Project Settings)

## Final Result

After completing these steps, you'll have:

-  Code repository on GitHub
-  Automatic Vercel deployment
-  Live application at FindBrexConsultants.co.uk
-  Continuous deployment on every push

## Complete Documentation Available

- `COMPLETE_DEPLOYMENT_GUIDE.sh` - Step-by-step commands
- `GITHUB_ACTIONS_SETUP.md` - Detailed GitHub Actions setup
- `VERCEL_DEPLOYMENT_INSTRUCTIONS.md` - Vercel configuration guide

## Need Help?

All scripts and documentation are included in your project directory with detailed step-by-step instructions for every part of the deployment process.

---

**Everything is ready - you just need to run the git push commands above! 🚀**
